Apc back ups pro 700 not charging

Back to APC UPS for Home and Office Forum I have a similar problem with my CyberPower UPS (model CP1000PFCLCD). It seems the only time it will charge the battery is immediately after a selftest; it charges the battery to full after a selftest but then it ridiculously thinks the battery stays fully charged while the battery actually gradually loses its charge (which will eventually destroy the battery if it's allowed to discharge too far). The reason I believe the UPS hasn't been keeping the battery charged is that the selftest reduces the reported battery charge from 100% to about 65% in a few seconds, and then it takes hours of charging before the UPS software (CyberPower PowerPanel Personal v2.2.0) reports the battery is again at 100%. So, for awhile it was possible to maintain a charge by periodically performing a UPS selftest. I've been doing a selftest about once per month. However, recently the UPS developed a second problem that magnifies the first: During the selftest, the pc "loses communication" with the UPS (connected via usb port), the software doesn't indicate the selftest has completed, and the UPS seems like it remains in battery mode... its internal fan doesn't stop spinning, as if it isn't cooling down and is continuing to drain the battery. To protect the battery from being drained so far that the battery is damaged, and to protect my pc from losing power and crashing, I respond by quickly shutting down the pc, then shut off and restart the UPS, and then restart the pc. After startup the UPS software reports the selftest was passed, but given the circumstances I don't have confidence that that report is valid. The software also reports the battery is fully charged, which is implausible since I know from experience that it takes hours to reach full charge after a selftest. My hunch is that the battery is now never being charged and will eventually be permanently damaged. I replaced the battery in the fall of 2019 because the original battery died. Perhaps the original battery would still be okay if the UPS had kept it charged. Includes: USB cable, User Manual Looking for Better Pricing? Please Contact Us for help! APC ProductsAPC Back-UPS ProAPC Power Saving Back-UPS Pro 700#BR700GOur Price: \$149.99 Note: Shipping charges may vary depending on the selected unit's weight or the quantity of units selected.As a result, the shipping charges may change from the value you receive at checkout. A customer representative will confirm these changes with you if they occur. The Back-UPS Pro family offers guaranteed power protection for high performance computer systems, routers/modems, external storage devices, game consoles and other electronics in your home or business. Models supply abundant battery backup during outages and stabilize unsafe voltage levels. They provide protection from damaging surges and spikes, and allow the use of management software so you get the most out of your unit. Premium features of this family include Automatic Voltage Regulation (AVR), an LCD display, and energy saving functions that reduce electricity use. Together with the rest of the Back-UPS Pro's standard features, they are the perfect choice to protect your data and keep your system available. Green mode - Patent-pending operating mode that bypasses unused electrical components in good power conditions to achieve very high operating efficiency without sacrificing any protection. Audible alarms - Provide notification of changing flywheel conditions Battery failure notification - Provides early-warning fault analysis on batteries enabling timely preventive maintenance Power-saving outlets - Automatically cuts power to idle equipment to conserve electricity. Resettable circuit breaker - Easy recovery from overloads; no need to replace a fuse. Battery-protected and surge-only outlets - Reserves power capacity and run time for connected equipment that require battery back-up while providing surge only protection for less critical equipment Cold-start capable - Provides temporary battery power when the utility power is out. Serial Connectivity - Use any Home Automation network to monitor and control the S20 through its RS-232 serial port. For information on how to communicate with the S20, see APC's Application Note #102. Crestron and AMX installers should visit their respective websites for information on how to integrate the S20 into those networks. Hot-swappable batteries - Ensures clean, uninterrupted power to protected equipment while batteries are being replaced Disconnected battery notification - Warns when a battery is not available to backup power. Dataline Surge Protection - Provides protection of connected equipment from power surges on the data lines. Automatic self-test - Periodic battery self-test ensures early detection of a battery that needs to be replaced. Adjustable voltage-transfer points - Maximizes useful battery life by widening the input voltage window or tightening the output voltage regulation. Adjustable voltage sensitivity - Provides the ability to adapt the UPS for optimal performance in specific power environments or generator applications. Audible alarms - Provides notification of changing utility power and UPS conditions. User-replaceable batteries - Increases availability by allowing a trained user to perform upgrades and replacements of the batteries reducing Mean Time to Repair (MTTR) USB connectivity - Provides management of the UPS via a USB port (not available on all models). Serial Connectivity - Provides management of the UPS via a serial port. Transformer-block spaced outlets - Protect equipment with input transformer blocks without blocking access to other receptacles. Boost and Trim Automatic Voltage Regulation (AVR) - Gives higher application availability by correcting low and high voltage conditions without using the battery. Intelligent battery management - Maximizes battery performance, life, and reliability through intelligent, precision charging. Safety-agency approved - Ensures the product has been tested and approved to work safely with the connected service provider equipment and within the specified environment. Lifetime data recovery warranty - Provides peace of mind by providing professional data recovery services in the event data is lost due to the failure of the unit. Building Wiring Fault Indicator - This LED informs users of potentially dangerous wiring problems in the wall circuit. Adjustable voltage sensitivity - Provides the ability to adapt the Power Conditioner for optimal performance in specific power environments or generator applications. Battery replacement without tools - Allows quick, easy battery replacement. LCD graphics display - Text and mimic diagrams that display modes of operation, system parameters and alarms. Boost and Trim Automatic Voltage Regulation (AVR) Gives higher application availability by correcting low and high voltage conditions without using the battery. Unattended shutdown This ensures that files are saved and the Operating System is properly shutdown in the event of a sustained power outage. Ethernet protection Shields hardware from damage Additional Surge Protected Outlets Surge Only outlets offer protection for non-data sensitive equipment like scanners and printers without reducing the unit's available power or battery capacity. This helps to maximize battery power for equipment that needs it most like a computer and monitor. Site wiring fault indicator Immediately warns you of wiring problems like improper grounds that could cause shocks or prevent the UPS from adequately suppressing surges. (120V units only) Automatic Self Test Biweekly testing of all internal components, including the battery, ensures your unit is ready when you need it. Intelligent battery management Maximizes battery performance, life, and reliability through intelligent, precision charging. Audible alarms Proactively notifies you of changing UPS and utility power conditions. Easy Overload Recovery Push-button circuit breaker instead of a standard fuse, eliminates the need to return the unit to the factory for service. Adjustable voltage sensitivity Provides the ability to adapt the UPS for optimal performance in specific power environments or generator applications. Adjustable voltage-transfer points Maximizes useful battery life by widening the input voltage window or tightening the output voltage regulation. LCD graphics display Text and mimic diagrams that display modes of operation, system parameters and alarms. Cold-start You can power on the unit without any input power. This provides temporary emergency battery power when the utility power is out. User replaceable batteries Save time and money by swapping the battery yourself. There is no need to send the unit to a factory service center. Hot Swap Batteries You can change the battery without powering down your equipment.
